Hypertrophic Cardiomyopathy: The Past, the Present, and the Future

given by:

Dr. Eugene Braunwald, M.D.

Hersey Professor of Medicine, Harvard Medical School

Dr. Eugene Braunwald, M.D. is the Distinguished Hersey Professor of Medicine at Harvard Medical School and the founding Chair of the Thrombolysis in Myocardial Infarction (TIMI) Study Group at the Brigham and Women's Hospital. He served as Chief of Cardiology and as Clinical Director of the National Heart, Lung and Blood Institute, and then as Chair of the Department of Medicine at the Brigham and Women's Hospital.

Dr. Braunwald's early work focused on the control and assessment of ventricular function, and he was the first to measure both left ventricular ejection fraction and left ventricular dp/dt in patients. His group described the first neurohumoral defect in human heart failure, demonstrated salvage of ischemic myocardium, and defined the pathophysiology of hypertrophic cardiomyopathy.

Science Watch listed Dr. Braunwald as the most frequently cited author in Cardiology with an h-index of 229. Dr. Braunwald served as an editor of *Harrison's Principles of Internal Medicine* and is the founding editor of *Heart Disease*.

Dr. Braunwald has received numerous awards and honours, including the Distinguished Scientist Awards of the AHA, the ACC, the ESC, and the World Heart Federation. He has received an honorary Doctor of Science degree from the University of Oxford. The living Nobel Prize winners in medicine voted Dr. Braunwald as "the person who has contributed the most to cardiology in recent years."
